Bellahut's Caffeine Slimming Complex
Helps Reduce The Appearance Of Cellulite

Congratulations on your purchase of Bellahut's Caffeine Slimming Complex. We pride ourselves on return customers so satisfaction from our customers is key and very important to us.

Please enjoy this product and if you have any questions please contact us at the email address above. Thank you for being a Bellahut customer!

Directions: Mix this peptide with a cream, gel or serum in order to make your own custom skin care solution. Keep in mind you should only mix this peptide at a **maximum rate of 10%**.

Do you have stubborn cellulite areas or just areas where you want to improve the smoothness of your skin? Bellahut's Caffeine Slimming Complex can help fade away that cellulite with the help of Caffeine and Bitter Orange Extract.

Key Ingredients:

Red Clover, a close relative to soy, is rich in isoflavones also known as phytoestrogens. Phytoestrogenic compounds may be utilized by the body in two different manners, depending upon what level of endogenous estrogen exists. If estrogen levels are low, as in the case of menopausal women, phytoestrogenic compounds will function to fill in or bind to the now empty estrogen receptor sites thus providing a weak proestrogenic effect. In the case of cellulite, it is the over-saturation of estrogen that maybe responsible for cellulite production. In this instance, phytoestrogenic compounds will bind to the estrogen receptor sites and emit a weaker estrogenic effect than would the endogenous estrogens had they been able to bind. It is this competitive inhibitory action that may potentially decrease the formation of cellulite.

The Cocoa plant is also rich in phytoestrogenic compounds as well as the xanthine alkaloid, theobromine. Caffeine, theobromine, and theophylline, are naturally occurring xanthines. Because of their close chemical structures, each of these xanthines function in very similar fashions.

Green Tea is well known for its antioxidant properties as well as its caffeine and theophylline content. This combination of xanthine alkaloids from cocoa and green tea, functions to increase microcirculation and fat metabolism. These substances are known to inhibit the enzyme phosphodiesterase while also providing beta-adrenergic stimulation.

Ingredients: Red Clover, Cocoa, Caffeine, Bittter Orange extract & green tea extract.

Cautions: Do not apply undiluted peptides or additives directly onto your skin. This is designed to be added to a formulation at the recommended maximum usage rate or less.

You can use Bellahut's premium cream or gel as your base for your formulation.
